Newrange Gold Corp.

Where Exploration Intersects Discovery

CORPORATE PROFILE

Newrange Gold Corp. (TSXV: NRG) was incorporated in 2006 as Colombian Mines Corporation, dedicated to exploring and advancing high quality mineral properties in Colombia. In July 2016, the Company diversified into the United States by acquiring the high-grade Pamlico gold project in Nevada, now expected to be the center of exploration efforts in the coming years. To reflect this geographical diversification, the Company changed its name to **Newrange Gold Corp.** in December 2016.

With a seasoned, highly successful management team and quality projects, Newrange Gold is committed to build long-term, sustainable value for shareholders and stakeholders.

An aggressive exploration program at Pamlico started in February 2017. Results so far have been very promising. Exploration will continue throughout the balance of 2018 and beyond to unlock value at this unique and exciting gold project.

Newrange Gold has a tight share structure with approximately 70% of the 78 million shares outstanding currently held by 20 shareholders. Company is well funded with no debt.

PAMLICO HIGH-GRADE GOLD PROJECT - NEVADA

Located in pro-mining Mineral County, Nevada, Pamlico is the Company's **flagship project**. It is notable for historic high-grade underground gold production and modern specimen gold discoveries. The district is situated within the "Walker Lane" mineral belt at its confluence with the E-W trending Pancake Range lineament in a belt of gold deposits that include Bodie, Aurora, Borealis, Paradise Peak, the famous Comstock silver-gold district and the immense Round Mountain mine. Historic records document underground gold mining and production (1885) from high-grade ore at Pamlico. **Held by private interests for most of its history, Pamlico remains almost unexplored.**

PAMLICO EXPLORATION HIGHLIGHTS

An aggressive, ongoing exploration program continues at Pamlico. Results to date have been highly successful, confirming district scale gold discovery potential.

WORK DONE BY NEWRANGE GOLD

- Underground saw cut channel sampling (Feb. – March 2017)
- Phase I & II Drilling (May – Nov. 2017)
- Property wide magnetic, radiometric and gravity surveys (summer 2017)
- Surface and underground mapping and sampling (ongoing)
- New claims staked increasing property size to 2,165 hectares
- **Phase III Drilling (Feb. 2018 - ongoing)**

RESULTS TO DATE

- Multiple high-grade and disseminated gold drill intercepts
- 6 new high-grade gold zones discovered near the Merritt Zone
- Confirmation by sampling and drilling of 65 to 245 meters wide NW-oriented gold corridor with known strike length of at least 365 meters

Select **high-grade, 100% oxidized, shallow** (0- 75 m) drill intercepts:

- DH P17-08: 9.1 m @ 28 g/T Au (incl. 1.5 m @ 85 g/T Au)
- DH P17-10: 6.1 m @ 98 g/T Au (incl. 1.5 m @ 341 g/T Au)
- DH P17-17: 4.6 m @ 44 g/T Au (incl. 0.8 m @ 244 g/T Au)

Note: Intercepts are uncapped average of all samples in drilled intercept. All intercepts are drilled length and do not imply true width. Additional results are available at www.newrangegold.com

Newrange Gold Corp.

Where Exploration Intersects Discovery

YARUMALITO PROJECT – COLOMBIA

LARGE, DRILLED GOLD-COPPER PORPHYRY AND VEINS SYSTEMS

- Escuela porphyry: 1km long, 400 meters wide, drilled to 850 meters down dip and open - Drill intercepts from 10 to 257 meters. Weighted avg. of 0.51 g/T Au over 65.8 meters
- Balastreras porphyry: Limited drilling indicates similar size and grade to Escuela porphyry
- Culebra Shear Zone: 2.5 km long high-grade epithermal mineralized zone - Drill intercepts from 5.9 meters @ 8.7 g/T Au to 1.9 meters @ 33.75 g/T Au

SIGNIFICANT EXPLORATION POTENTIAL

- Escuela and Balastreras porphyries open to expansion
- 2.5 km long Culebra Shear Zone has only 6 drill holes
- Other virtually unexplored geochemical, geophysical & geological targets

EL DOVIO PROJECT – COLOMBIA

GOLD-RICH POLYMETALLIC DISCOVERY

- “Stringer” zone: 1 km strike length and 68 meters apparent widths in outcrop
- Saw cut channel samples up to 104 g/T Au
- VMS receptive horizon with up to 100 meters in apparent width
- Excellent metallurgy (96.4% for gold, etc.)
- No third party payments or royalties – 100% of surface rights owned

SIGNIFICANT EXPLORATION POTENTIAL

- High-grade outcropping mineralization traced 220 meters down dip and open
- VMS target remains unexplored
- High-grade drill results:
 - 12.4 m @ 4.0 g/T Au, 20 g/T Ag, 4.2% Cu
 - 6.9 m @ 5.9 g/T Au, 34.3 g/T Ag, 5.9% Cu, 1.3% Zn

Note: *Intercepts (Colombia) are uncapped average of all samples in drilled intercept. All intercepts are drilled length and do not imply true width. Additional drill results are available at www.newrangegold.com*

MANAGEMENT AND DIRECTORS

Robert G. Carrington	President, CEO and Director
Dave Cross	Chief Financial Officer
Gloria Carrington	President – CMC Colombia and Country Manager
Robert Archer	Director
David Salari	Director
Ron Schmitz	Director
Paul Wang	Director

SHARE STRUCTURE – April 20, 2018

Shares	Number
Issued and Outstanding	77,561,898
Warrants	9,924,463
Warrants – RMM acquisition	1,700,000
Stock Options	5,935,070
Fully Diluted	95,121,431

SHAREHOLDER VALUE CREATION CATALYSTS

UNLOCKING PAMLICO POTENTIAL

Near term catalysts

- Phase III drill results
- Ongoing surface sampling results
- Metallurgical tests results
- Test mining using Merritt decline

Looking forward: Exciting “blue sky” potential

- Less than 1% of property drilled
- Multiple new targets identified
- Sediment hosted “Carlin type” potential
- Additional high-grade gold potential at depth

TWO HIGH POTENTIAL ADVANCED PROJECTS IN COLOMBIA
