

Newrange Gold Corp.

Where Exploration Intersects Discovery

COMPANY HIGHLIGHTS

Newrange Gold Corp. (TSX-V: NRG) was incorporated in 2006 as Colombian Mines Corporation, focused on exploring and advancing high quality mineral properties in Colombia. In July 2016, the Company diversified into the United States, acquiring the high-grade Pamlico gold project in Nevada and an interest in the Leadville district of Colorado. In December 2016, the Company changed its name to **Newrange Gold Corp.** to better reflect this diversification.

With a seasoned and highly successful management team and excellent properties, the goal is to build long-term sustainable value for shareholders.

The current exploration and development focus is on the Pamlico high-grade gold project where an aggressive exploration program started in February 2017. Exploration will continue throughout the balance of 2017 on this unique and exciting gold project with multi-million ounce discovery potential.

Work is also planned for the Colombian properties in the second half of 2017.

PAMLICO GOLD PROJECT – NEVADA

Located in pro-mining Mineral County, Nevada, Pamlico is the Company's flagship project. It is notable for historic high-grade underground gold production and modern specimen gold discoveries. The district is situated within the "Walker Lane" mineral belt at its confluence with the E-W trending Pancake Range lineament in a belt of gold deposits that include Bodie, Aurora, Borealis, Paradise Peak, the famous Comstock silver-gold district and the immense Round Mountain mine. Historic records document limited underground production (1885) from Pamlico of ore containing 7,968 grams of gold per metric tonne (g/T Au). **Held by private interests for most of its history, Pamlico remains very underexplored.**

WORK BY NEWRANGE GOLD:

- Staked new claims covering outcropping gold mineralization in sediments on the eastern side of the District, with select outcrop samples assaying 5.02 g/T Au.
- Extensively sampled (channel cut) the Merritt decline for the first time ever.
- Sampling results confirmed multiple high-grade structures assaying from 28.9 g/T Au over 1.5 meters to 104.75 g/T Au over 1.5 meters within an extensive zone of disseminated mineralization averaging 2.92 g/T Au over 75.5 meters in the decline.
- Initiated a first phase drilling program at the beginning of May, 2017 to follow up on the Merritt decline sampling results and drilling by previous owners/operators. The results will guide exploration of similar targets on the property including; the Gold Box, Central, and Sunset Mine zones.

SOME OF THE BEST HISTORIC DRILL INTERCEPTS AT PAMLICO:

- M10-04: 6.9 meters @ 38.57 g/T Au.
- M10-05: 2.3 meters @ 165.84 g/T Au.
- PAM99-03: 4.6 meters @ 239.66 g/T Au.

Newrange Gold Corp.

Where Exploration Intersects Discovery

YARUMALITO - COLOMBIA

EL DOVIO - COLOMBIA

Multiple targets:

- Escuela porphyry: 1km long, 400 meters wide, drilled to 850 meters down dip and open.
- Balastreras porphyry: Limited drilling indicates similar size and grade to Escuela porphyry.
- Culebra Shear Zone: 2.5 km long high-grade epithermal mineralized zone with drill intercepts from 5.9 meters @ 8.7 g/T Au to 1.9 meters @ 33.75 g/T Au.

Significant exploration potential:

- Escuela and Balastreras porphyries open to expansion.
- 2.5 km long Culebra Shear Zone has only 6 drill holes.
- Other virtually unexplored geochemical, geophysical & geological targets.

MANAGEMENT AND DIRECTORS

Robert Carrington	President, CEO and Director
Dave Cross	Chief Financial Officer
Gloria Carrington	President – CMC Colombia Country Manager
Ron Schmitz	Director
Paul Wang	Director
David Salari	Director

Multiple targets:

- “Stringer” zone mineralization, indicated 1 km strike length, apparent widths to 68 meters in outcrop, saw cut channel samples up to 104 g/T Au.
- VMS receptive horizon with up to 100 meters in apparent width.
- Newrange has 100% of surface and mineral estate.
- No third party payments or royalties.

Significant exploration potential:

- High-grade outcropping mineralization traced 220 meters down dip and open.
- VMS target remains unexplored.

High grade-drill results:

- 12.4 m @ 4.0 g/T Au, 20 g/T Ag, 4.2% Cu.
- 6.9 m @ 5.9 g/T Au, 34.3 g/T Ag, 5.9% Cu, 1.3% Zn.
- Excellent metallurgy (96.4% for gold, etc.).

SHARE STRUCTURE - May 23, 2017

Shares	Number
Issued and Outstanding	63,533,435
Warrants	20,317,001
Warrants RMM Acquisition	1,700,000
Stock Options	5,019,798
Fully Diluted	88,870,234

- Recently raised \$2.4 million in two financings.
- Cash on hand: \$1.8 million. No debt.
